

Lucas Freitas

Senior Full Stack Software Engineer specializing in Python, Django, React, PostgreSQL, AWS, and CI/CD automation. Experienced in designing, developing, testing, and deploying scalable business applications.

Experience

Fullstack Software Engineer

Icetek, Québec, Canada (Remote) — *Mar 2025 – Present*

Tech: Python, AWS, PostgreSQL, C++, Plotly Dash, CI-CD, Linux

- Refactored legacy systems to improve maintainability and performance, focusing on cleaner architecture and lower technical debt.
 - Built interactive dashboards and **data-rich** UIs in Python and Plotly Dash to support data-driven workflows.
 - Migrated legacy C++ configuration data into PostgreSQL to improve client-specific database management and reduce reliance on legacy files.
 - Built a connection manager with pooling and failover across AWS-hosted and local replicated databases to improve resilience.
 - Automated deployment pipelines with GitHub Actions to streamline updates to AWS services and reduce manual release effort.
-

Fullstack Software Engineer

Mercos, Joinville, Brazil (Remote) — *Jan 2024 – Mar 2025*

Tech: Python/Django, JavaScript/React

- Developed end-to-end software in Python/Django and JavaScript/React with a focus on scalability and performance.
 - Wrote unit and integration tests to improve reliability across the Python/Django and JavaScript/React stack.
 - Conducted code reviews and mentored teammates to raise code quality and support team execution.
 - Contributed to maintaining high-quality standards with modern tools and practices.
-

Front-End Engineer

Before TI, Campo Grande, Brazil — *Mar 2021 – Jan 2024*

Tech: Vue.js, JavaScript, Git, Docker, Jest, Cypress

- Developed and maintained a high-volume telecom sales system handling daily transactions, supporting scalability and operational reliability.
 - Upgraded legacy codebases using Vue.js.
 - Supported QA by building Cypress test automation for the frontend codebase.
 - Promoted to Front-End Team Lead, overseeing code quality, project timelines, and new product development.
-

Front-End Developer (Internship)

Absolutier, Campo Grande, Brazil — *Aug 2020 – Feb 2021*

Tech: JavaScript, Vue.js, Quasar, Git, Docker

- Implemented an educational platform with responsive layouts using JavaScript, Vue.js, Quasar, and Git.
 - Translated UI/UX designs into production-ready features.
 - Applied modern frameworks and agile practices in a startup environment.
-

IT Teacher

Universidade Federal do Mato Grosso do Sul, Campo Grande, MS — *Apr 2019 – Aug 2019*

- Taught **Basic Computer Skills for Seniors** as part of a university extension program.
 - Designed and delivered practical lessons to help older adults gain digital literacy.
-

BackSCNR Project

Universidade Federal do Mato Grosso do Sul, Campo Grande, MS — *Jan 2019 – Jun 2020*

- Served as the initial developer in a small interdisciplinary research project that evolved into **BackSCNR**, an internationally funded startup.
 - Built a Python application in Blender's 3D environment to analyze patient torso scans and automate scoliosis detection and quantification.
 - Automated detection and quantification of scoliosis to support physiotherapy research.
-

Skills

- **Backend:** Python, Django, PostgreSQL, AWS, CI/CD.
 - **Frontend:** React, Vue.js, JavaScript.
 - **Testing:** Jest, Cypress.
 - **Tools:** Git, Docker, Linux.
-

Education

Bachelor's Degree in Software Engineering

Universidade Federal do Mato Grosso do Sul — *Concluded in 2021*

English

Proficient in comprehension and reading. Good writing and speaking skills.
